Product description

A used demountable META shelf rack (6580x635x2500 mm) made of galvanized steel is a durable and versatile storage system in various environments, such as warehouses, garages or industrial areas. Galvanized steel offers excellent corrosion resistance, making the storage rack durable and suitable for various environments, including humid conditions. The demountable feature makes it easy to set up, adjust or move the storage rack as needed. This is convenient for flexible storage solutions and any future changes to the setup. With 40 galvanized shelves, the rack provides ample space for storing various goods. The height adjustability of the shelves makes it possible to adapt the storage space to different types of products. The closed side walls provide additional protection to the stored goods and prevent items from falling to the sides. The open front and back facilitate easy access to stored items, making loading and unloading more efficient. This design is useful in situations where speed and convenience are important. With an overall width of 6580 mm and a depth of 635 mm, the storage rack provides ample space without taking up much floor space. This makes it suitable for both large storage areas and smaller workspaces.

Specifications

Article arrangement: Used

Version: 5 sections

Walls: walls closed

Colour: colorless

Width (mm): 6580

Height (mm): 2500

Internal depth (mm): 600

Type number: 7172GB

Type: Meta static shelving rack

Material: steel

Subgroup: Shelving used

Surface treatment: galvanised with signs of use

Internal width (mm): 1255

Depth (mm): 635

Options: shelves adjustable and removable

EAN Code (Gtin) 8719424234411
